

FIRE NUMBER:

K70580

FIRE SIZE:

2,193 hectares (aerial mapped)

FIRE STATUS:

Out of Control

RESOURCES:

Currently, there four 21-person unit crews, seven initial attack crews, 18 Lytton First Nation firefighters, an Incident Management Team, structure protection personnel, four water tenders, 11 helicopters and other operational and support staff supporting the response.

UPDATES:

Due to more accurate mapping the fire is now an estimated at 2,193 hectares. This growth was primarily in the western flank in high elevation areas. Terrain remains one of the greatest challenges in accessing and actioning the wildfire in these higher elevations.

A warming and drying trend will continue to bring hot and dry conditions this week which could cause an increase in fire behaviour. Yesterday, fire activity has remained quiet.

On Friday night, an aerial infrared scan was completed on the east flank and showed a minimal number of hot spots. Lytton First Nations and BC Wildfire Crews targeted the detected hot spots throughout the day on Saturday. A second aerial infrared scan was conducted last night to identify any remaining hot spots which will be actioned throughout today.

Crews hiking along the southern portion of the western flank. July 23, 2022

Crews on both the north and south flanks continue to make progress towards containment, despite steep terrain and increasingly high daytime temperatures. High temperatures require crews to take frequent breaks to prevent heat stress and exhaustion.

UPDATES CONTINUED

Growth continues to occur on the west flank of the fire, but the fire remains on the north side of the Stein River. Initial Attack crews are prepared to respond to any spotting that could occur on the south side of the Stein River. Crews continue to extend the current sprinkler line further eastward along the Stein Valley walking path into the coming days. Currently, 1,500 ft of hose and sprinklers are installed along the Stein Valley walking path. As the fire advances further along the north side of the Stein Valley, the hoselay and sprinkler system will be extended to match the progression of the fire on the opposite side of the valley. The purpose of sprinkler system is to add moisture into the valley bottom to protect park infrastructure and cultural values.

The Lytton Ferry is now back in service and available to transport crews across the Fraser River. Crew transportation to both the ferry and helicopters will significantly decrease travel time to the worksite and increase crew hours on the fire and overall safety.

FORECAST

The warming and drying trend is expected to persist throughout the weekend and into next week. With less cloud cover, sunny weather and temperatures warming up more quickly throughout the day, relative humidity's will be lower than over the weekend and fuels will continue to dry out. This is expected to contribute to increased fire behaviour and fire activity, creating potentially

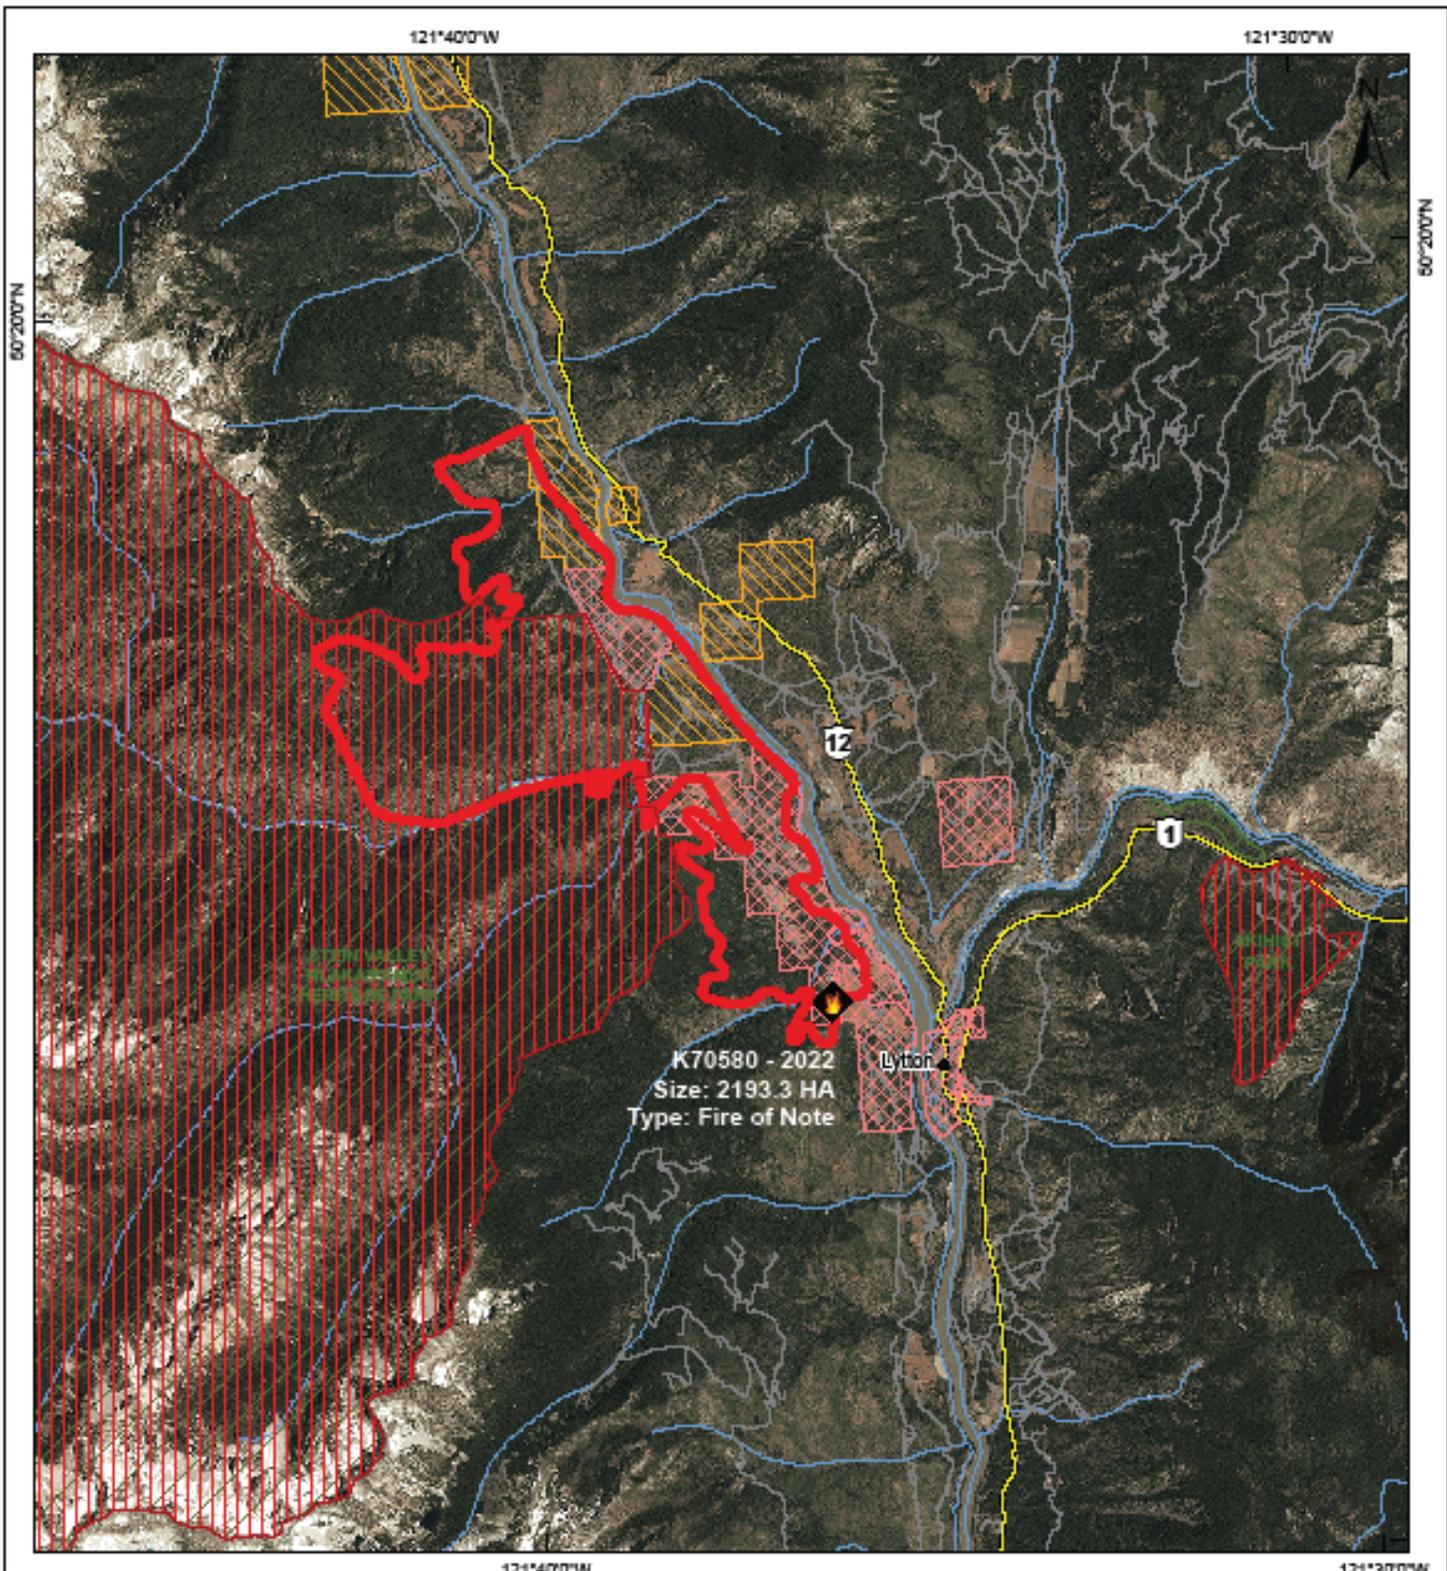

EVACUATION ALERTS AND ORDERS:

Lytton First Nation has issued **Evacuation Orders** for Nohomeen IR 13, Papyum IRs 27, 27A, Lytton IR 27B, Papyum Graveyard 27C, Stryen IR 9 (West of Stein River).

Lytton First Nation has issued **Evacuation Alerts** for Stryen IR 9 and Lytton IR 9A. For more information, please contact the ESS Coordinator at 778 254-9754.

Thompson Nicola Regional District has issued an **Evacuation Order** and **Evacuation Alert** for Electoral Area "I" (Blue Sky Country). For more information, contact the TNRD Emergency Operations Centre at 250-377-7188.

Disclaimer:
Wildfire particulars for the current fire season, including both active and inactive fires, are supplied from various sources. The data is released from operational systems nightly to the public map. Wildfire data may not reflect the current fire situation, and therefore should only be used for reference purposes.
Wildfire data from the incident is updated when practicable and the occurrence of individual fire updates will vary. The information is intended for general purposes only and should not be relied on as accurate because fires are dynamic and circumstances may change quickly. The levels of current fire activity within the mapped fire perimeters can vary widely.
